SAFECHARGER

Charge your electric car quickly and safely

3 Phase versatile charging station for charging electric vehicles with up to 22kW of power and a range of smart features.

- Safety: complies with IEC61851
- Protection: RCCB (B) residual current device, protection against overvoltage, undervoltage, overload, short circuit, short circuit to ground
- Compatibility: type 2 connector (all European cars)
- Control: manual, automatic, via application, RFID card
- Interface: WiFi, RS485 with ModBus commands (easy integration with other systems or home management)
- LCD: clear 2.8 " color display
- Application: household, companies
- Adjustable charging current value 6, 10, 16, 32A
- **Wallbox is ready for implementation into Home Management**

Member of

SAFEMETER

Accurate measurement of consumed and produced electrical energy

- We offer electricity meters with communication: GSM/LTE, eSIM, NB-IoT/Cat M1, LoRaWan, RS485, WiFi
- Ideal solution for Local Distribution Networks, Community Energy, Smart Homes and Industry

SAFELECTRIC

Reduce housing costs with solar energy

Hybrid solar 3P inverters 10 kW and 20 kW with battery storage

- Input 2x MPPT 10 kW, or input 3x MPPT 20 kW
- Input voltage 200 - 1000 V
- High inverter efficiency up to 97.8%
- Communication: RS485, WiFi
- Passive cooling of the device
- Meets all demanding safety criteria and regulations (conditions for connection to the distribution network)
- Report via web interface and application

Become an active customer and manage your consumption according to advantageous dynamic tariffs from your electricity distributor or trader

Dear ladies, gentlemen, friends, supporters and partners of the Czech electrical and electronic engineering industry.

Let me extend my warmest greetings to you through the new catalogue of the Electrical and Electronic Association of the Czech Republic, whether in its printed or digital form. In 2025, we will celebrate 33 years of activity of this legally independent employers and business association bringing together a wide range of electrical and electronic engineering

companies, as well as companies closely cooperating with the electrical and electronic engineering industry. As in previous years, through this Catalogue, we want to provide you with basic information about the very broad professional and product focus of our members. Companies in the electrical and electronic engineering industry are one of the pillars of the Czech economy, regardless of their size and ownership structure. Thanks to the predominantly subcontracted nature of their products for a very wide portfolio of customers, the electrical and electronic engineering industry as a whole resists fluctuations in demand from individual segments of the economy and records steady growth. Its importance is growing especially in the current period, in which the entire Czech economy is trying to cope with the impact of dynamically changing energy prices, both on the resource side and on the efficient consumption side. The research and innovation potential of electrical and electronic engineering companies, technical universities and research organisations, which work very closely together within the Electrical and Electronic Association of the Czech Republic, contribute a wide range of often unconventional and unique technical solutions to mitigate their impact. We devote great efforts to digital transformation, not only of internal company processes leading to increased efficiency,

but also in the area of communication with the state administration. To the greatest extent possible, we strive to develop transformational digital technologies such as Blockchain, implementation of artificial intelligence algorithms or industrial applications of 5G networks and make them available to a wide range of users from other industries. We also see an indispensable role for the association in the area of human resources. We have traditionally been involved in various forms of support for technical education in schools at all levels, as well as effective assistance to companies in providing in-house training aimed at strengthening not only digital but also technical and technological skills of employees.

The Electrical and Electronic Association of the Czech Republic not only defends the interests of its members, among other things, by mediating social peace in companies, but also contributes permanently to the cultivation of the entire Czech industrial environment, in which the electrical industry plays a very important role.

The space of this catalogue is limited and in case you cannot find the information you are looking for, please contact the secretariat of the Electrical and Electronic Association of the Czech Republic, which is a competent intermediary for communication not only with the external business environment, but also with technical education at all levels, with social partners and, last but not least, with institutions and authorities representing the state. In case of your interest or need, the secretariat of the association will gladly provide you with further information concerning the Czech electrical and electronic engineering industry.

It is my honour to assure you, as our partners and customers, on behalf of myself and the entire Board of Directors of the Electrical and Electronic Association of the Czech Republic, that it is our constant effort to continue to strengthen the good name of the Czech electrical and electronic engineering industry, its high professionalism and openness to cooperation.

Jiří Holoubek

- ✓ Biobanks

CAI, Hajkova 2747, 130 00 Prague 3, tel.: +420 272 096 222, mail@cai.cz, www.cai.cz

Dear readers,

Welcome to the Electrical and Electronic Association's catalogue for 2025. Leaving aside political influences, the introduction of artificial intelligence technologies based on large language models is likely to be a major trend in 2025. This trend, which is gaining momentum, is becoming a key tool for process automation, efficiency improvement and innovation in a wide range of industries. We expect to see deployment not only in administration but also in purely technical/technological processes. Gradually, the world of the Internet will be transformed and those technologies that can reliably prove the originality of data will gain in importance.

The Electrical and Electronic Association is here to unite the voice of the electrical and electronic engineering industry. We are a national, industry-wide association that brings together companies not only from the electrical and electronic engineering industry but also from related industries, particularly ICT and mechanical engineering.

We consider it normal for companies to be a member of an industry association. It is part of their social responsibility and especially their concern for the environment in which they operate.

With the Electrical and Electronic Association, you gain professional know-how, valuable contacts and an ethical lobby in the industry. We enable our members to participate in the development of new legislative standards, work in expert groups and other activities. We promote ethical business, and we also actively subscribe to the Code of Conduct of the Confederation of Industry of the Czech Republic. Our activities are governed by our statutes and policy statement; these documents are published on the official website of the association at www.electroindustry.cz.

In the following lines, I would like to introduce the basic range of services we provide to our members.

BUSINESS

We support pro-export activities of member companies

We pursue a liberal policy and actively support the removal of non-tariff and technical barriers to trade. We provide association presentations and accompanying programmes at domestic and international trade fairs, exhibitions and conferences. We are founding members of the Trade Fair Committee at the Confederation of Industry of the Czech Republic, where we propose electrical and electronic engineering trade fairs to the list of events supported by the state. We organise joint Czech stands and allow those members of the association who do not exhibit directly to use the association's stand free of charge. We participate in, and also organise business missions ourselves, cooperate with partner electrical and electronic engineering associations and look for opportunities for your business. We maintain contacts with relevant embassies and foreign partners. We negotiate discounts or other benefits for our members with trade fair administrations that organise exhibitions and trade fairs in the electrical and electronic engineering industry.

We promote our members

We publish a catalogue of EIA DIRECTORY member organisations, which is distributed not only abroad, but is also given to foreign embassies in Prague and Czech business and economic departments around the world. The catalogue of member organisations is a printed form of a part of our website www.electroindustry.cz and serves as a starting point for information about the Czech electrical and electronic engineering industry and its companies.

We supervise the market

We develop activities that serve the purpose of more effective market supervision by the relevant national authorities in the Czech Republic, and we are working with other initiatives across Europe to support the widest possible application of this new framework.

We organise conferences

We inform the professional public about the developments in the electrical and electronic engineering industry through professional conferences where leading experts discuss current issues and topics. We connect the activities of industry and universities, not only within the Czech Republic. We have been involved in the work of the Industry-Higher Education Forum.

We organise general meetings

Our General Meeting is a prestigious meeting of our members with representatives of industry, government, representatives of the Confederation of Industry and other relevant partners, which is held twice a year. It provides a networking platform that complements the professional programme and informal meetings. Our important regular guests include representatives of the Ministry of Industry and Trade, Technology Agency of the Czech Republic, Electrotechnical Testing Institute, Czech Office for Standards, Metrology and Testing, Czech Accreditation Institute, Ministry of Education, Youth and Sports, Ministry of Labour and Social Affairs, Czech Social Security Administration and others.

We purchase energy centrally for our members

In 2024, the energy market already functions properly, so we will buy electricity and gas on the commodity exchange for our members (who are interested). At a time of high prices for these commodities, joint purchasing is one way to get good prices.

Research & Development – Projects, Grants & Subsidies

EIA has been a partner and beneficiary in several grant programmes and is available to its members as an advisory body, partner and assistant in finding suitable contacts at the Ministry of Industry and Trade, Ministry of Labour and Social Affairs, Technology Agency of the Czech Republic or CzechInvest. We are aware of upcoming calls and inform members about them in a timely manner, actively seeking opportunities for

involvement. We advise member companies on tax deductions for research and development.

Testing and accreditation

We cooperate closely with the Czech Accreditation Institute in formulating demands on technical requirements for products, and on specific projects with the Electrotechnical Testing Institute.

We know what's happening in the (electro)industry

We have information from companies and the legislative process, we know about all important events in our industry. We know what is coming and in what form legislative measures will be implemented. We can guess from surveys and investigations how the industry will develop.

Protection of whistleblowers

We have developed a simple process to establish and operate whistleblower protection hotlines in companies to meet not only legislative requirements, but more importantly to enable easy reporting and investigation of whistleblowing.

We have launched the first industry blockchain

You can join our free trusted platform, which is made up of many entities in the Czech Republic and beyond, and build your own business on it. The openness of the system together with the credibility of the involved entities allows you to use our blockchain not only as a private but also as a public authority. And remember, no information is stored in the blockchain, so we do not face the problem of data sensitivity, personal data protection or document classification.

Membership in EIA provides you with access to all services of the Confederation of Industry of the Czech Republic

We are important members of the Confederation of Industry of the Czech Republic and thanks to this our members can participate in business missions with the highest representatives of the country, use a wide network of contacts or, for example, comment on all legislation that is being prepared in the Czech Republic and the EU. You will thus learn about upcoming legislation before your competitors. The Confederation is a mandatory commenting point – we work in expert committees on the preparation of new legislation.

EMPLOYMENT

Social reconciliation

We negotiate with trade unions in accordance with Act No. 2/1991 Sb. on collective bargaining, as amended, on behalf of member organisations that give their consent. We conduct social dialogue with the KOVO trade union and conclude a higher-level collective agreement. In this way we help our members to secure social peace. We have a contract for 2025 and it is available on our website.

Education and training

We search for and implement state-supported projects in the field of human resources, and assist member entities with their acquisition and implementation. We support both students and educators, especially in secondary schools.

Jan Prokš

Director of the Association

MEASURING AND TESTING EQUIPMENT

- ELECTRIC QUANTITIES
- NON-ELECTRIC QUANTITIES
- REVISION AND CONTROL
- THERMAL CAMERAS AND ACOUSTIC CAMERAS

THE NATIONAL BLOCKCHAIN REGISTRY (NABRE) is an innovative digital platform that uses blockchain technology to secure and verify data. It serves as a secure repository for digital content registration, copyright protection and provides tools for transparent and unquestionable voting. Thanks to its technology, it guarantees authenticity, unlimited data validity and legal certainty, in line with the eIDAS 2.0 regulation.

ELECTION AND VOTING APPLICATION PER ROLLAM VOTING

- **Board elections / Approval / Transparent process / Tamper-proof results**
- **How it works:** You log into NABRE, enter the list of voters and the documents being voted on. You set the start, duration of voting and start the voting process. The system allows continuous status checking and provides a downloadable report at the end of the status.

REVOLUTIONARY LOGISTICS TOOL FINAL INSPECTION AND TRACKING

- **Guaranteed proof of shipment contents / Tamper-proof / Ideal for valuable products**
- **How it works:** Log into NABRE, add your shipment details, turn on the camera to record the packing and sealing, and save the recording directly to NABRE when you're done. Track the tracking of your shipment and share proof of its contents and condition when needed.

YOUR PERSONAL NOTARY OFFICE COPYRIGHT CONFIRMATION

- **Secure storage with unlimited validity / Evidence at Court / Data protection**
- **How it works:** The easy process starts with logging into the NABRE system to upload documents proving your ownership. Your data is then registered in the blockchain, and you receive a digital receipt as proof of ownership.

ABB s.r.o.www.abb.cz

ABB is a global technology leader in electrification and automation, enabling a more sustainable and resource-efficient future. By connecting its engineering and digitalization expertise, ABB helps industries run at high performance, while becoming more efficient, productive and sustainable so they outperform. At ABB, we call this 'Engineered to Outrun'. The company has over 140 years of history and more than 105,000 employees worldwide. ABB's shares are listed on the SIX Swiss Exchange (ABBN) and Nasdaq Stockholm (ABB). www.abb.com

We are a family company from Czech republic located in Vysocina region. We excel in flexibility in small projects. We are manufacturers of interference suppression elements for electronics and electrical engineering to ensure that devices meet Electromagnetic Compatibility (EMC) standards. We can make interference suppression filters, capacitors, chokes, RC limiters, cable assemblies, cast components in polyurethane, laser mark and mill customer parts. We also supply components for electrical engineering – ferrite cores, inductors, transformers, CuSn and magnet wires, PWM regulators, HV igniters, varistors, compensation capacitors, coils.

Averna, a.s.

Averna, a.s., is a provider of premium highly specialized comprehensive services in the field of power electronics, measuring technology and industrial automation with an international scope. We offer our customers tailor-made solutions to meet specific needs thanks to our own team of superior experts in electrical engineering, engineering and software development, as well as our complete understanding of the issues surrounding material engineering, electronics, data management and process engineering. We also integrate all our core competencies with future technology development, working with virtual and augmented reality, IoT, and providing our own unique technology for acoustic, vibration and haptic testing. Guaranteed efficiency. We guarantee the maximum efficiency in the cost and performance of managing the entire order process from design to complete implementation. We implement projects completely in-house in accordance with our own integrated process management policy. Thanks to a comprehensive understanding of the issues and our comprehensive focus, we rank among the most experienced teams in the Czech Republic and abroad. Our long-term knowledge and experience gained through the implementation of unique projects enable us to be the European leader in automotive applications and the world leader in testing systems. As the only Czech company we are a proud member of the worldwide National Instruments Alliance program, where we have reached the level of the Gold Alliance Partner.

www.cameatechnology.com

CAMEA Group, a.s.

CAMEA was founded by university researchers in 1995. Motivated by new challenges, the company has introduced numerous cutting-edge solutions in two main categories – Intelligent Transportation Systems (ITS) and systems for visual inspection in industry. The core product of the current portfolio and the most complex source of traffic data is Weigh-In-Motion (WIM). CAMEA is the world leader in the system's application for direct enforcement which is a solution with the best available influence on road protection. With 40 % of employees in development, CAMEA keeps its strong R&D orientation, both in SW and HW. The company offers a possibility of custom designing, as well as further unique customer solutions that range from OEM to turn-key. All products are continuously improved to ensure long-lasting user satisfaction. CAMEA closely cooperates with the Brno University of Technology on application of advanced AI and other projects with state-of-the-art outcomes. Today, more than 1350 traffic lanes on 4 continents are monitored with CAMEA's intelligent systems that save costs and improve road safety and transportation in general.

CEITEC BUT – Central European Institute of Technology

CEITEC – Central European Institute of Technology is a joint project of the Brno University of Technology, Masaryk University and five other partner institutions in Brno. This top project to build a modern scientific research infrastructure – CEITEC – is founded on the mutual synergies of seven research programs. Brno University of Technology is responsible for two of these, which given their size and expertise are very important programs, for which modern laboratories will be built and equipped, including clean rooms of the highest class, at the Pod Palacký Vrch Campus of the Brno University of Technology: Advanced Nanotechnologies and Microtechnologies, Advanced Materials.

DELONG INSTRUMENTS a.s.www.delong.cz

**delong
instruments**®

Since 1992, the Czech company Delong Instruments has been active in R&D of transmission electron microscopes, electron-optic systems, electron guns and other high-tech devices in the field of micro and nanotechnologies. Delong Instruments focuses on the development and production of low voltage electron microscopes LVEM 5 and LVEM 25 and Schottky electron gun DIGUN. The company is also well-known for its unique customer and OEM solutions (e. g. complex mechatronic systems for laser applications) and as a supplier of customized special components (such as vacuum components or components for X-ray microscopy sources) made from the first draft up to the final device. For its expertise, DI is a favoured partner in large international projects.

www.elektroprim.cz

Elektroprim-Koutník, a.s.

We provide electrical engineering installations, from project development to full implementation. The core of our business includes activities in external electrical installations for both high-voltage and low-voltage systems, from project design to ensuring and assembling the necessary supplies of investment and installation materials, conducting our own installation work, and performing initial inspections and commissioning. These activities are carried out across all sectors of the national economy and for projects of any scale. About the Company Our company was founded in May 1990 as one of the first electrical engineering firms established after the political changes of 1989. Until the end of 1998, it operated as a private business under the name Ivo Koutník-Elektroprim. Due to the continuous expansion of its activities and the growing importance of the company, it was transformed into a joint-stock company under the name Elektroprim-Koutník, a.s. Currently, the company focuses on external electrical installations in both high-voltage and low-voltage fields, providing comprehensive services from project design and implementation to final measurements and commissioning. At the customer's request, we also provide these services individually. When preparing project documentation in our Eplan studio, we closely collaborate with the customer to jointly find the most suitable solutions in terms of quality, reliability, and cost, while fully respecting specific individual requirements for components and project designs. Naturally, we also accept projects prepared by other organizations and implement them as provided by the customer. We ensure the delivery of installation and investment materials according to customer requirements in the shortest possible timeframes, sourcing from all major manufacturers of electrical engineering materials and equipment in the Czech Republic and abroad.

EPLAN provides software and service solutions in the fields of electrical, automation and mechatronic engineering. The company develops one of the world's leading design software solutions for machine and panel builders. EPLAN is also the ideal partner to streamline challenging engineering processes. Both standardised as well as customised interfaces to ERP and PLM/PDM systems ensure data consistency along the whole value chain. Working with EPLAN means boundless communication across all engineering disciplines. No matter whether small or large enterprises: Customers can apply their expertise more efficiently. EPLAN wants to grow further with customers and partners and pushes integration and automation in engineering forward. Worldwide, EPLAN supports over 51,000 customers with more than 145,000 installations. „Efficient engineering“ is the focus. EPLAN was founded in 1984 and is part of the owner-operated Friedhelm Loh Group. The Friedhelm Loh Group operates worldwide with 18 production sites and 80 international subsidiaries. The entire group employs more than 11,500 people and generated revenues of around EUR2.5 billion in 2017. For the tenth time in succession, the family business has won the accolade “Top German Employer” in 2018. In addition Friedhelm Loh Group was recognized as “Top vocational trainer” according to a study of Deutschland Test and Focus Money.

The Faculty of Applied Informatics of Tomas Bata University in Zlín is one of the highly progressive and best-rated workplaces in the Czech Republic. The University itself is among the 5 % of the top rated universities in the world. The main scope of work is a highly professional educational activity corresponding to the level of world knowledge synergistically connected with excellent applied research and practice. The professional level of the faculty is provided by the following departments: Institute of Informatics and Artificial Intelligence, Institute of Automation and Control Engineering, Department of Electronics and Measurement, Institute of Process Control, Institute of Computer and Communication Systems and Institute of Safety Engineering. Thanks to very good results in basic and applied research, the Faculty of Applied Informatics is accredited as a workplace enabling habilitation (doc.) and appointment procedures (prof.) in the fields of Applied Informatics and Machine and Process Control. The continuous growth of professional competencies of employees is ensured by applied talent management in accordance with the Bafa principles. Currently, the Faculty is accredited to provide higher education in the following study programs: Software Engineering, Applied Informatics in Industrial Automation (specialization: Intelligent Systems with Robots, Industrial Automation), Information Technology (specialization: Software Engineering, Cybersecurity), Security Technologies, Systems and Management.

Faculty of Electrical Engineering and Communication Brno University of Technology

The Faculty of Electrical Engineering and Communication of Brno University of Technology offers university education in bachelor, master and doctoral study programmes which are focused mainly on the educational areas of Electrical Engineering, Cybernetics, Informatics and Power Engineering. There are also accredited interdisciplinary study programmes of biomedical and audio engineering or cybernetic safety, respectively. The main research and development activities of the Faculty are focused on the following areas of electrical engineering, electronics, communication and control devices: Biomedical Engineering: AI and machine learning in medical diagnostics; Wearables for health monitoring; Bioprinting and Tissue Engineering; Bioinformatics for Biotechnologies; Nanotechnologies for medical sensors. Chip Design: Development of SiC and GaN technologies; Sensor design; Electronic for space; ASICs; Analogue, digital and mixed-mode chip design. Cybersecurity: Modern cryptography and privacy protection; Quantum and postquantum security; Usage of AI in cybersecurity; Hardware acceleration of cryptography on FPGAs; Security of optical networks and optical sensors; Security in mobile and wireless networks; Application of cybersecurity in power energy, transportation, health, industry, financial and banking, critical infrastructure. E-mobility: Electric and hybrid driving units; Electrification of hydraulic solutions; Electric drive efficiency; Power electronics integration; High speed electric drive technology. Energy Storage: Advanced Li-ion batteries; Post-Li-ion batteries; Na-ion batteries; Second-life use. Nuclear Engineering: Reuse of spent fuels; Accelerator driven subcritical nuclear reactors; Accelerator driven systems; New generation of nuclear reactors; Education and training in nuclear engineering. Space Applications: Design and development of space applications; Satellite design; Antennas for space communications.

www.hager.cz

Hager, with its German-French roots and headquarters in Blieskastel, Germany, has been a specialist in electrical installations in residential and commercial buildings for 70 years. The history of the electrical brand Hager began in 1955, when brothers Hermann and Oswald Hager, together with their father Peter Hager, founded the company as a purely family business. Hager is one of the leaders in modern electrical installations. The flagship of the Hager brand has become mainly home switchboards and modular devices, especially components for safe energy management. The company has more than 1,600 patents and a number of innovations and world premieres. Thanks to successful acquisitions, Tehalit line storage systems have been added to the Hager family since the 1990s. One of the most successful acquisitions in Hager's history took place in 2010, when Berker switches and home appliances were added to Hager's portfolio. The Hager product family also includes witty charging stations for electric vehicles. In 2025, Hager Electro celebrate 30 years of operation in the Czech Republic. A team of sales, technical and marketing specialists take care of Czech and Slovak customers.

www.hardwario.com

Since 2016, HARDWARIO a.s. has been developing and manufacturing electronic devices for IoT (Internet-of-Things) applications. Thanks to its diverse network of business partners, it delivers solutions to a wide range of industries worldwide – e.g., energy, agriculture, food industry, pharmacy, retail, building management, etc. In its products, the company guarantees the purchase of components only through authorized distribution channels and manufactures all electronics in the Czech Republic in collaboration with renowned EMS partners. The company's primary expertise is in wireless technologies, so-called LPWAN networks, represented by NB-IoT and LTE-M technologies, and private and public networks using LoRaWAN technology. HARDWARIO has extensive experience optimizing device consumption and long-term battery life, even in challenging operating conditions. The company offers its product solutions to partners as platforms. These platforms are open and undergo a continuous innovation cycle. They allow their customers to implement their firmware naturally, with the possibility of training and full support from HARDWARIO. Above the platforms, there is a wide range of standardized applications and implementations, and HARDWARIO can ensure a completely customized implementation if needed. The company's flagship platform is CHESTER, which offers a high degree of hardware modularity (over 30 expansion modules in the portfolio) and is built on the modern Zephyr RTOS operating system. This proven ecosystem of modules, firmware SDK, documentation, and tools significantly shortens the time to market for innovative IoT solutions. In addition to electronic devices, HARDWARIO operates the middleware service HARDWARIO Cloud, allowing its customers to access data messages from connected IoT devices easily.

www.ima.cz

We are an original Czech company dealing with modern technologies in the areas of identification, localization, evidence and IoT. IMA has a long-standing profile as an independent centre focused on the development and application of microcomputer electronics. In 2017, IMA started working with the German company WITTE Automotive on innovative gesture recognition systems. WITTE Automotive Group, of which IMA became a full partner on January 1, 2021, is a leader in mechatronic locking systems and a major business group with a global presence. Our systems are used daily by hundreds of thousands of people worldwide by customers such as Škoda Auto, ČVUT, ČEZ, mBank, LEGO ... We develop smart and innovative solutions and always strive to stay a few steps ahead of the competition. Participation in international grant projects aimed at finding new useful solutions for the future helps us to do this. IMA products are used by many companies, authorities and schools to manage access rights, access control and data logging. Thanks to the wide range of features, the system can be flexibly adapted and provide access control to secure facilities based on individual customer needs. In addition to identification and security systems, IMA s.r.o. also offers dispensers for work equipment, keys or food and beverages.

We are a stable, strongly pro-export company, established in 1995 in Jihlava. We specialize in the design, production, optimization and assembly of cable harnesses and electromechanical units that are part of modern technologies. We create customized solutions with emphasis on detailed analysis, cost optimization, functionality, quality and compatibility of individual components with the fulfillment of established specifications and standards. With modern equipment, manual labor and automated machines, we produce from single units to million dollar batches. We supply our products to a range of industries such as automotive, medical, measurement, aerospace and defence. In addition to manufacturing, we are also engaged in the trade of components required for the production of wire harnesses. Our product range includes a wide portfolio of connectors, wires, crimp contacts, shrink tubes, resistors, PCB boards and other materials that enable our customers to complete their projects with quality, speed and efficiency. We are a reliable partner for companies that need quality, flexible solutions and expert support in their day-to-day operations.

The history of our company goes back to 1990, when we started business with importing office equipment and measurement instruments. In 1993, we changed to limited liability company with registered capital 100,000 CZK. At this time, MICRONIX also expanded its activities to the division of batteries. At the beginning of 1996, we increased the capital up to 700,000 CZK, and also, we established the related company in Slovakia based in Banská Bystrica. Then, the company Yuapol in Poland was opened in 1997. The company entered the new millennium already with assets of 10 mill. CZK and new office in Bratislava. A year later, we expanded to Hungary. In 2006, the Polish company Yuapol was renamed to MICRONIX PL. We have our own assembly team and we deal not only with foreign trade, but also with calibrations and warranty and after warranty service on all our products.

E: obchod@modemtec.cz

ModemTec s.r.o. has been successfully engaged in the development and production of equipment for communication over low-voltage and middle-voltage power lines, enable reliable data transmission over distances of several tenth of kilometers for over 20 years. The latest product from company's portfolio, called PD Doctor, focuses on online detection and diagnostics of partial discharges. PD Doctor-increases operational reliability and security of electrical energy supply- reduces production of CO₂ emissions- reduces operating and maintenance costs- contributes to the prediction and extension of the system lifetime. PD Doctor brings precise and reliable diagnostics and monitoring of middle-voltage line insulation and equipment in transformer stations and substations. It also increases the reliability of electricity supply thanks to online detection of line damage and anomalies in operating conditions. The system stores measured data, so it is possible to analyze the history of operating conditions, including events before failures. Online monitoring of partial discharges can determine the trend of electrical line and equipment degradation, which leads to better maintenance planning. PD Doctor reduces necessary cost for prophylaxis by thousands of euros per transformer station per year and eliminates service trips.

Veletrhy Brno, a.s.

www.bvv.cz

Veletrhy
Brno

BW Trade Fairs Brno is one of the most prominent trade fairs organizers in Central and Eastern European countries. Its core business activity is organizing of trade fairs and exhibitions at the Brno exhibition centre and providing exhibition services. The business of BW Trade Fairs Brno builds on a tradition established in 1928 by the Exhibition of Contemporary Culture in then Czechoslovakia. In the 1950's the first Exhibition of Czechoslovak Engineering was held in the exhibition grounds and since then the exhibition activities have continued to grow to the present shape of a Central European Exhibition Centre. No wonder the City of Brno became the epitome of trade fairs and exhibitions for the Czechs and their neighbours. In Czech, the word "Brno" is synonymous with "trade fair". At the moment, the Brno Exhibition Centre offers more than 130,000 sq m of net exhibition area thus ranking among the world largest exhibition centres. Brno Exhibition Centre first opened in 1928 commemorating the first decennium of independent Czechoslovakia founded in 1918. Brno as a location for the new exhibition centre was chosen on purpose being conveniently situated between Prague and Bratislava. A number of exhibition halls on the fairground are referred to as true jewels of functionalist architectural style. The latest addition to the fairground complex is the P Hall opened in June 2009 offering over 10,000 sq m of net exhibition area. Every year approximately 50 trade fairs or other exhibition events are held at the Brno Exhibition Centre and over 1 million visitors come to see them. Traditionally, the largest and most important event is the annual MSV International Engineering Fair, one the most prestigious engineering fairs in Europe. Apart from trade fairs the centre is an excellent venue for holding congresses, conventions, high-level meetings, gala evenings, concerts or sports events. In 2007 the centre became the setting for a music performance of one of the world's most successful bands, the Rolling Stones. BW Trade Fairs Brno also offers complete exhibition services including design and construction of exhibition stands. Also, BVV Trade Fairs Brno is the Czech agent for trade fairs organized by Messe Düsseldorf. The company operates exhibition services providers, in Düsseldorf and Moscow.
